SKILLS

+ Frontend Core

- Next.js
- React
- Astro
- Tailwind CSS
- HTML5
- CSS3
- SCSS
- TypeScript
- JavaScript
- Shadcn/UI

+ Backend & Database

- Node.js
- PHP
- PostgreSQL
- Prisma ORM
- Supabase
- REST APIs

+ CMS & Performance

- WordPress
- EmDash
- Gutenberg
- Elementor

+ Tools, AI & DevOps

- Vercel
- Git
- Cloudflare
- Figma
- Claude
- Gemini
- CI/CD

FULL-STACK DEVELOPER

IAȘI, ROMANIA

After more than 8 years in web development, my work today centers on modern web applications built with Next.js, React and PostgreSQL. Solid architecture, security built in from the start, and technical decisions grounded in what the business actually needs to achieve.

I develop with AI, which I use to validate architecture decisions and shorten the path to delivery, without compromising on performance or scalability. The result: secure solutions that hold up over time and drive real growth.

EXPERIENCE

Proven Track Record

A timeline of continuous technical growth.
From creative UI implementation to complex full-stack architecture.

- Full Stack Developer | Next.js & AI**
SELF-EMPLOYED
SEP 2025 → PRESENT
React, Next.js, TypeScript, PostgreSQL. Full stack, start to finish. AI tools do a large part of the implementation. I do the architecture, the trade-offs, and everything that decides whether the thing holds up under real use. I ship complete applications on my own, at a pace that used to take a team.
- Frontend & WordPress Developer**
ENLIVY SRL • COLLABORATOR
DEC 2023 → FEB 2026 • 2Y 3 MOS
Transitioning from a full-time role to a long-term strategic partnership was a natural step given our strong synergy. I continue to work closely with the Enlivy team, providing specialized WordPress development and support for key projects.
- Frontend & WordPress Developer**
ENLIVY SRL • FULL-TIME
AUG 2022 → DEC 2023 • 1Y 5 MOS
Joining Enlivy marked a shift into a fully remote, highly professional environment where distributed collaboration was key. I worked on a diverse range of projects, from granular updates to complex full-site builds for both national and international clients, with a strong focus on the US.
Navigating strict deadlines and high-intensity sprints sharpened my ability to deliver quality code under pressure. A key highlight was collaborating on a high-performance in-house toolkit for WordPress (using Gutenberg and Elementor). This solution empowered clients with fully editable interfaces while ensuring the final products achieved top-tier performance and SEO scores.
- WordPress Developer**
FREELANCE
FEB 2020 → MAY 2022 • 2Y 4 MOS
During this period, I focused on delivering tailored web solutions through a strategic partnership with a UI Designer. Together, we managed projects for a global client base, handling everything from initial requirements to final implementation in WordPress.
My focus ranged from building presentation websites from scratch to taking over existing projects that required code improvements and optimization. Providing ongoing maintenance and implementing specific feature requests taught me the importance of adaptability and long-term client support.
- Web Designer & Frontend Developer**
WEBGRADE SRL • FULL-TIME
MAY 2018 → SEP 2019 • 1Y 5 MOS
This is where my journey began. I started by crafting UI designs, logos, and icons in Adobe Photoshop and Adobe Illustrator, and quickly expanded my skillset to bring those visuals to life using HTML, CSS, and JavaScript.
Beyond the technical growth, I was part of a young, passionate team where open communication and helping each other came naturally. Working under supportive management taught me early on that a great culture is just as important as clean code.
