

FULL-STACK DEVELOPER

With over 7 years of experience, I combine a sharp eye for detail with a pixel-perfect approach to frontend implementation. My focus remains on developing highly optimized WordPress sites tailored for speed and high conversion, while extending these capabilities into the modern web ecosystem to build complex applications with Next.js, React and PostgreSQL.

I leverage an AI-augmented workflow to validate architecture and accelerate development, ensuring every line of code is optimized for performance and scalability. My focus is delivering secure, high-impact solutions that drive real business growth.

EXPERIENCE

A timeline of continuous technical growth.
From creative UI implementation to complex full-stack architecture.

FULL STACK DEVELOPER | NEXT.JS & WORDPRESS

SELF-EMPLOYED – SEP 2025 → PRESENT

In parallel with my client work, I focused on expanding my skillset from WordPress to the modern Full Stack ecosystem (React, Next.js, PostgreSQL).

To maximize efficiency, I adopted an AI-assisted workflow. I use current AI tools not just to write code faster, but to validate architecture decisions and bridge the gap between technical logic and business requirements.

FRONTEND & WORDPRESS DEVELOPER

ENLIVY SRL • COLLABORATOR – DEC 2023 → PRESENT

Transitioning from a full-time role to a long-term strategic partnership was a natural step given our strong synergy. I continue to work closely with the Enlivy team, providing specialized WordPress development and support for key projects.

FRONTEND & WORDPRESS DEVELOPER

ENLIVY SRL • FULL-TIME – AUG 2022 → DEC 2023 • 1Y 5 MOS

Joining Enlivy marked a shift into a fully remote, highly professional environment where distributed collaboration was key. I worked on a diverse range of projects, from granular updates to complex full-site builds for both national and international clients, with a strong focus on the US.

Navigating strict deadlines and high-intensity sprints sharpened my ability to deliver quality code under pressure. A key highlight was collaborating on a high-performance in-house toolkit for WordPress (using Gutenberg and Elementor). This solution empowered clients with fully editable interfaces while ensuring the final products achieved top-tier performance and SEO scores.

WORDPRESS DEVELOPER

FREELANCE – FEB 2020 → MAY 2022 • 2Y 4 MOS

During this period, I focused on delivering tailored web solutions through a strategic partnership with a UI Designer. Together, we managed projects for a global client base, handling everything from initial requirements to final implementation in WordPress.

My focus ranged from building presentation websites from scratch to taking over existing projects that required code improvements and optimization. Providing ongoing maintenance and implementing specific feature requests taught me the importance of adaptability and long-term client support.

WEB DESIGNER & FRONTEND DEVELOPER

WEBGRADE SRL • FULL-TIME – MAY 2018 → SEP 2019 • 1Y 5 MOS

During this period, I focused on delivering tailored web solutions through a strategic partnership with a UI Designer. Together, we managed projects for a global client base, handling everything from initial requirements to final implementation in WordPress.

My focus ranged from building presentation websites from scratch to taking over existing projects that required code improvements and optimization. Providing ongoing maintenance and implementing specific feature requests taught me the importance of adaptability and long-term client support.
